

Alexander V. Tuzikov is a Head of Mathematical Cybernetics Department of the United Institute of Informatics Problems of the National Academy of Sciences of Belarus, Belarus State Prize Laureate (2002), Belarus representative in IAPR (International Association of Pattern Recognition, <http://www.iapr.org/>). Alexander Tuzikov graduated from the Belarus State University (Minsk, 1980), received the candidate of physics-mathematical sciences degree of Institute of Mathematics (1985) and doctor of physics-mathematical sciences degree of the Institute of Engineering Cybernetics of the National Academy of Sciences of Belarus (2000), Professor (2005), Corresponding Member of the National Academy of Sciences of Belarus (2014). He was a General Director of the United Institute of Informatics Problems of the National Academy of Sciences of Belarus from 2009 to January 2022. He received results in the processing and analysis of digital images, the calculation of geometric moments of digital image objects, was working in the field of medical applications, including development of algorithms for processing medical images of various modalities (ultrasound, computed and magnetic resonance imaging, histological). He is engaged in research in the field of bioinformatics, including studies of protein-protein interactions based on computer modeling and analysis of databases of protein complexes, structural comparison and prediction of protein interactions, analysis of genetic data in order to identify dependencies in them, computer modeling and search in databases, as well as generation of promising chemical compounds using artificial intelligence technologies that can be used to develop new drugs against HIV-1, SARS-CoV, tuberculosis and others.
